

What to do in case of COVID-19 infection

■ Students who have undergone a PCR test are restricted from attending classes until the PCR test result is notified.

1. If there are suspicious symptoms or contact with an infected person before attending class, be sure to conduct a rapid antigen test.

※ For those who have not been vaccinated or those who have passed 6 months (180 days) or more after the second dose, it is recommended to perform rapid antigen testing every 2 days.

▶ Negative rapid antigen test result: Attend class (no special measures required)
▶ Positive rapid antigen test result: PCR test conducted at the local public health center
→ Class attendance is restricted until the PCR test result is notified by the public health center (Online classes, assignment substitution, etc.)

▶ Negative PCR test result: Attend class (no special measures required)
▶ Positive PCR test result: Restriction of attendance until release date
→ Be sure to notify the Academic Affairs Office (02-6477-5114, kje@igse.ac.kr)

2. Please wear a KF80 or higher mask before attending class

3. If a large number of confirmed cases occur in a class, courses may be changed into online courses regardless of the school's BPC level

4. If a professor or his/her family member (living together) is infected, the class will be switched to online classes

■ What to do in each situation

	Vaccinated person	Unvaccinated person
Student infected	<ul style="list-style-type: none"> ▶ Online class or official leave of absence ▶ The release date is according to the notification date of the public health center. 	<ul style="list-style-type: none"> ▶ Online class or official leave of absence ▶ The release date is according to the notification date of the public health center.
Professor's family member infected	<ul style="list-style-type: none"> ▶ After the rapid antigen test, if the result is negative, you can attend class 	<ul style="list-style-type: none"> ▶ Online class ▶ The release date is according to the notification date of the public health center.
Close contact with infected person	<ul style="list-style-type: none"> ▶ After the rapid antigen test, if the result is negative, you can attend class 	<ul style="list-style-type: none"> ▶ After the rapid antigen test, if the result is negative, you can attend class

※ If you are notified of the case above during class, please leave the class immediately and conduct a rapid antigen test after returning home.

※ If more than 20% of students in a class are infected, class can be changed into online class.

- Vaccinated person: Those who are between 14 and 90 days after the second vaccine shot, those who have been vaccinated for the third time
- Non-vaccinated: Those who have not been vaccinated, those who have passed 90 days or more after the second vaccine shot.
